Data set: Top Baby Names by State

   This data set shows occurrence of baby name between 1910 to 2012; it also give the information about gender and year relate to name. The data source is public.tableau.com, and he data format is excel. This data set includes data type of numbers and letters. I believe names are the independent variables and the occurrence of name are the dependent variables. The audience could be all the families in USA who going to have new borns. My assumption is that people do not like a public name and they do want their baby's name appear too many times. The information tells me every different states could has their own prefer name.

Evaluation Of Information Sources
Data set: Gender by name
Source:https://archive-beta.ics.uci.edu/ml/datasets/591

   This data set was donated on 2020-03-15, so it is in two years. Purpose is to inform or educate, and the audience is also for students. The data has no Ideological slant. It publish by UCI Machine, and the quality control is also done by this website, but it does not have information of the creator. There is no logical fallacies and research are base on real primary source. This data set also recorded true facts.
